

## Create Life-Like Dentures and Partial with Ideal Flexibility and Comfort

# Flexident

### Lightweight - Strong and Durable

Flexident partials and dentures are unbreakable and can be made thinner than traditional acrylic partials, providing more comfort and confidence for the patient.

Flexident flexible partials have just the right degree of flexibility and will not warp or become brittle.

### Aesthetically Pleasing

Flexident provides ideal translucency that blends with the natural tone of tissue for a natural appearance, and is available in Light Pink, Regular Pink and Dark Pink.

Unsightly metal clasps are replaced with resilient tissue colored clasps made from the same strong nylon-based thermoplastic resin material.

### Versatile

Flexident can be used for immediate Dentures, Transitional Dentures, Space Maintainers, Periodontally-Compromised Cases, Gum Veneers, Orthodontic Appliances, TMJ Splints and the replacement of missing teeth in pediatric patients.

It can be used in combination with metal frameworks and / or precision attachments.

### Biocompatible

Flexident can be used for patients allergic to conventional acrylic restorations.

Combination with metal frame

Combination with natural color clasps
